

U Value Compliance

The Pioneer Composite Door Collection

Declaration of compliance with Part L of the Building Regulations 2011

Panelstock have calculated u values for all the composite door styles supplied, using the Build Check software in conjunction with Distinction Doors.

The Build Check calculations are recognised by FENSA and CERTASS and reports for each style can be provided on request.

The worst case scenario relates to our Parama 1 Glazed, which is the equivalent of a half glazed door.

The calculation was made using a half glazed GRP slab with a standard double glazed unit, Profile 22 profile and aluminium low threshold.

The above calculation achieves the 1.6 W/M²K, therefore, all of our door styles will offer you the same rating or better.

The Favourites Decorative Door Panel Collection

Panelstock can confirm that all our panels comply with part L of the Building Regulations 2011 with the exception of the Richmond Full. The Richmond Full will therefore no longer be available.

All the calculations have been done in line with the requirements of EN 14351.
For more information on individual Panel U Values our customers can access data by logging onto the download section found in their secure account area.
